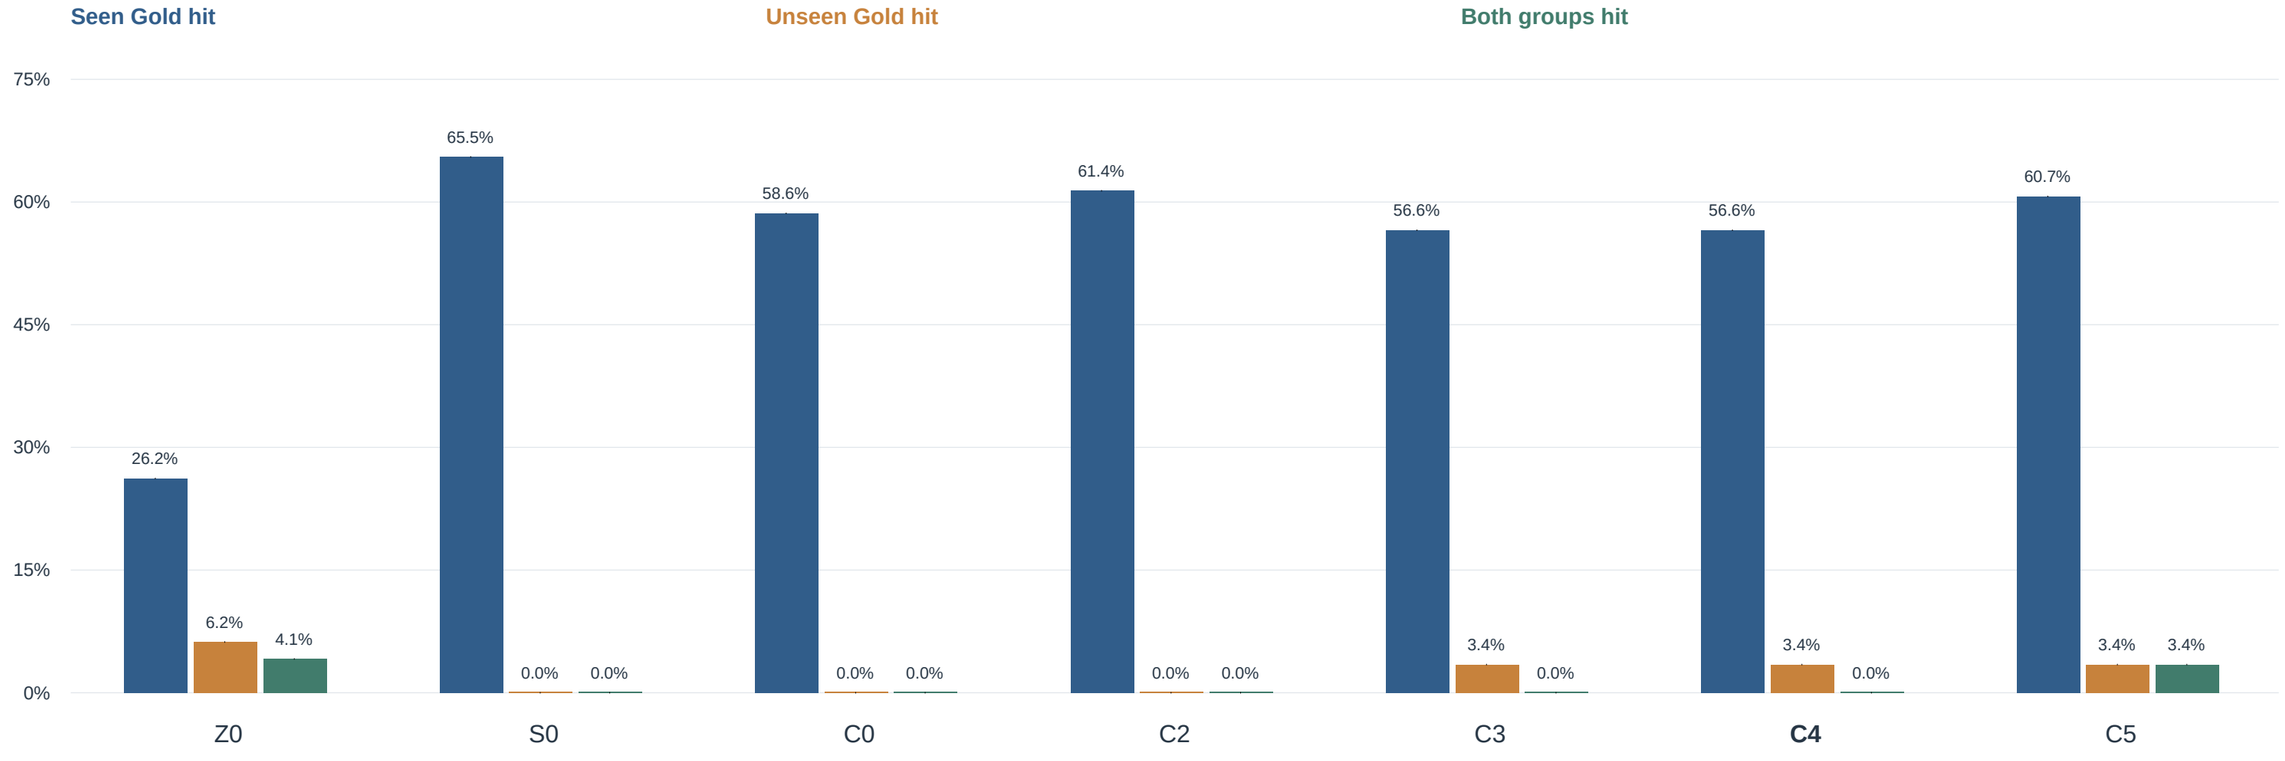
Mixed-label coverage: recovering any unseen query does not recover both label groups

ONE view; 145 mixed queries (29 logical steps). Hit rates use the same unfiltered 216-class ranking and Top10.



C4: Seen hit 56.6%, Unseen hit 3.45%, simultaneous hit 0%. Z0 simultaneous hit: 4.14%. Zero bars are shown explicitly.

Groups refer to target Gold coverage, not filtered candidate lists. Hit-any can rise while one target group remains missing.

Three-seed SD shown where nonzero. Query replicates and seeds are dependent; no significance claim.
